## Summary

---

### Production and Consumption Likely To Decline in 1982/83

Although U.S. producers turned out the largest burley crop on record, total U.S. tobacco production, forecast at 1.94 billion pounds, is 6 percent below last year. Reduced acreage of flue-cured and some other types caused the smaller crop. The outlook for 1983 points to a further reduction because the effective quotas are lower for flue-cured and burley.

U.S. tobacco use for 1982/83 will likely fall short of production, leaving next summer's ending stocks 6 percent higher than the 3.6 billion pounds carried into this year. Domestic tobacco supplies for 1982/83 are 3 percent larger than last season even though the crop is smaller; beginning stocks are 8 percent larger.

Auction prices for this year's flue-cured tobacco increased as the marketing season progressed. Season-average prices were again record high, but the increase was only half as great as last season because demand was not as strong and larger supplies were available. Burley sales began on November 17, with prices averaging about the same as a year ago. Over three-fourths of the burley crop may be sold by Christmas. Prices for fire-cured and dark air-cured types 35 and 37 have been

lower than last year, but prices for dark air-cured type 36 have been higher.

Declines in both exports and domestic use will pull down total tobacco use in 1982/83. In volume, U.S. exports of unmanufactured tobacco during July-October 1982 declined by about 6 percent from a year earlier, and sluggish auction buying suggests that shipments will continue to be lower the rest of the season. A decline is also indicated for domestic use of U.S. tobacco; factors include weaker demand for cigarettes, continued reductions in tobacco used per cigarette, and use of imported flue-cured and burley in cigarettes.

U.S. cigarette output for 1982 may drop 5 percent from 1981 because of declines in both exports and domestic use. Domestic cigarette consumption may be down 1 percent in 1982. Largely because of increased Federal and State excise taxes, both total and per capita consumption of cigarettes is expected to decline in 1983. The volume of cigars and smoking tobacco consumed may continue to decline. Output of chewing tobacco and snuff is up a little.

Even with heavy yearend sales, U.S. exports of unmanufactured tobacco during 1982 may not equal last year's 584 million pounds (265,000 metric tons or 690

million pounds, farm-sales weight). However, the total export value will likely rise. Prospects for next year's exports have dimmed because of the strong U.S. dollar, weaker demand, and large overseas production.

Imports of unmanufactured leaf and processed scrap comprised 31 percent of tobacco used by U.S. manufacturers during the last marketing year—28 percent of tobacco used in cigarettes and 45 percent of that used in other products. January-October imports for consumption were 15 percent below a year earlier, and this year's total imports are expected to decline from last year's 436 million pounds, because of larger domestic supplies. However, despite greater domestic supplies, manufacturers in 1983 may increase use of cheaper imported tobacco to hold down costs.

The flue-cured tobacco supply for July 1982-June 1983, at 3.13 billion pounds, is down 1 percent from last year. Larger beginning stocks were offset by a smaller crop. Despite weaker demand than last year, this year's grower prices reached a record \$1.79 a pound, 12 cents above 1981, largely because price supports were 7 percent higher. With marketings above indicated use, ending stocks are expected to rise about 60 million pounds above this year's 2.15 billion.

The national flue-cured marketing quota for 1983 is 10 percent below 1982. The effective quota (reflecting adjustments for net overquota marketings) was estimated to be 895 million pounds, 8 percent lower than 1982. Price supports are expected to go up 5 to 7-1/2 percent next season, reflecting a rise in the USDA prices paid index, plus the discretion the Secretary of Agriculture has in adjusting support levels.

The burley supply for October 1982-September 1983 is estimated at 1.86 billion pounds, 8 percent above last season. The October 1 carryover rose by 12 percent. As of December 1, the 1982 crop forecast is 789 million pounds, 8 percent above 1981's outturn. However, because many growers produced more than they can sell without penalty, marketings are estimated at 740 million pounds.

The marketing quota for burley and acreage allotments for several other kinds under quota will be announced by February 1. Supplies of fire-cured and dark air-cured are above last season, whereas supplies of Maryland and cigar tobacco are lower.

## Tobacco Situation

### TOBACCO PRODUCTS

#### U.S. Cigarette Production Lower

Falling sales will likely cause U.S. cigarette production this year to decline 5 percent from 1981 (table 2). In addition to the Federal excise tax increase of 8 cents a pack effective January 1, 1983, there is a one-time floor stocks tax of 8 cents a pack. Because of this, inventories are being drawn down. Cigarettes subject to the stocks

tax include those held on January 1, 1983, in public warehouses by manufacturers; those held by distributors, wholesalers, and subjobbers; and those held in distribution warehouses by retail chains and cooperatives—essentially all inventories except those held by retailers.

U.S. consumption totaled 480 billion cigarettes during January-September 1982, 5 billion below a year earlier. Based on State cigarette tax receipts, unit sales for the first 9 months of 1982 declined 1 percent from the corresponding period of 1981. Cigarette consumption is

<sup>1</sup>Includes leading brands. A 3 percent discount is made for payment within 10 days or 2 percent within 14 days. <sup>2</sup>Effective January 1, 1983, the Federal excise tax will double to \$8.00 per 1,000 cigarettes. <sup>3</sup>For 1940-74, see TS-151, March 1975; 1974-76, see TS-177, September 1981. <sup>4</sup>Manufacturers increased prices by a different amount. The change shown represent a major manufacturer whose prices are between the highest and lowest.

expected to decline further during the next 12 months. Although sales of low-tar, low-nicotine cigarettes rose sharply over the last decade, this year they are only slightly above last year.

Retail cigarette prices in October 1982 were 15 percent higher than in October a year ago. The increase is three times that of the rise for all consumer prices during the period. Nine States raised cigarette taxes this year, compared with six in 1981. By September, the weighted-average State tax was 14.2 cents a pack, 0.8 cents above a year earlier (table 3).

In November, the Federal Trade Commission (FTC) released its annual report on cigarette labeling and advertising. Promotion and advertising expenses reached a record \$1.24 billion in 1980, a 13-percent gain over the previous year.

The FTC reported to Congress that it had obtained consent judgments against five cigarette companies to settle charges that they did not clearly and conspicuously disclose the Surgeon General's health warning in all

cigarette advertisements. As part of the settlement, the cigarette manufacturers must display the warning in all advertising appearing in the U.S. and American territories; use larger lettering in billboard advertisements and print the warning in a single line across the bottom of the billboard rather than in a box; place the warning on vending machines; and in foreign-language advertisements, disclose the message in the same language as the advertisements themselves. In addition, the report summarized trends in cigarette consumption, tar and nicotine content, and advertising and promotion. Sales of low-tar and low-nicotine cigarettes have been rising, and a large share of advertising expenditures has gone to promote them.

In March 1981, the FTC began to report the level of carbon monoxide, in addition to the level of tar and nicotine, contained in all brands of domestic cigarettes. A discussion of the potential health hazards of carbon monoxide in cigarette smoke appears in a May 1981 FTC staff report to Congress.

## Smokeless Tobacco Use Gaining a Little

Both production and sales of chewing tobacco declined in the third quarter. However, total production for the year is expected to slightly exceed last year's 90 million pounds. Snuff production is also above 1981 (table 4).

Third-quarter domestic use of smoking tobacco—including imports—is down from a year earlier. For all of 1982, smoking tobacco consumption may drop 5 percent from last year (table 2).

Consumption of large cigars (including cigarillos) totaled 2.5 billion during January-September, 7 percent less than a year earlier. The total for the entire year will be down by a similar percentage (table 2). With rising prices, a larger share of sales volume has become concentrated in the higher price categories, and this pattern is expected to continue in 1983.

## U.S. EXPORTS AND IMPORTS

### Exports May Be Down for 1982

Exports of unmanufactured tobacco during July-October were 6 percent below a year earlier, but for January-October they totaled only 1 percent below a year earlier. Shipments in the last 2 months of the year are expected to be below November-December 1981. Total 1982 exports will likely be 550 to 575 million pounds, compared with 1981's 584 million (265,000 metric tons, equivalent to 690 million pounds farm-sales weight) (table 6).

Calendar 1983 exports are expected to fall from 1982. The strong U.S. dollar, weaker demand, and larger overseas production at prices attractive to foreign manufacturers will limit U.S. sales.

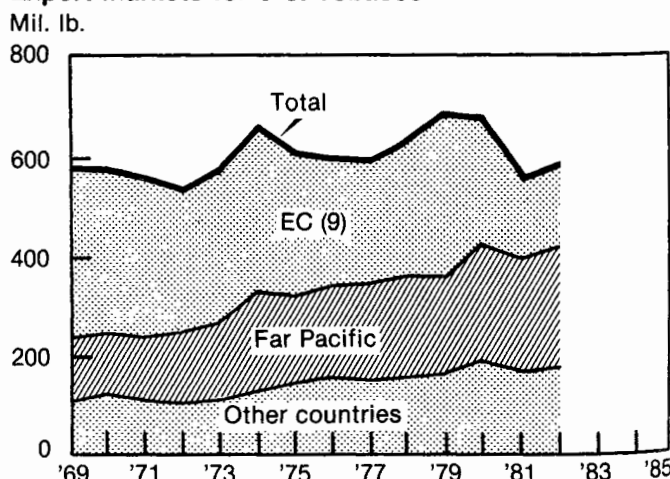

For January-October 1982, a decline in exports was registered for flue-cured, but the other major export class, burley, rose. Kentucky-Tennessee fire-cured exports increased slightly, while Virginia fire- and sun-cured rose sharply. Dark air-cured exports also rose, but both Maryland and cigar declined (table 6). Among major U.S. markets, Europe, including the European Community, took less U.S. tobacco while Asian markets took more (tables 5 and 6). Exports under USDA-financed programs this past fiscal year were nil (table 7).

### Imports Decline

Through October 1982, U.S. tobacco imports for consumption (duty paid) were 15 percent below a year earlier (table 8). The drop occurred in cigarette tobacco, including Oriental and the "manufactured or not manufactured" category. Burley and flue-cured imports dropped sharply because of increased domestic supplies in calendar 1982. Cigar leaf and scrap purchases also declined, reflecting weaker demand for cigars. Imports may increase next year.

U.S. stocks of foreign-grown cigarette and smoking tobacco rose over the past 12 months. On October 1, 1982, stocks totaled 879 million pounds (farm-sales weight), 17 percent above a year earlier. Nearly three-fifths of the foreign-grown stocks consisted of flue-cured and burley.

## Study of Imports Requested

Two tobacco-State Congressmen have asked the General Accounting Office (GAO) to study the impact of increasing imports on U.S. tobacco producers. The request included these issues:

- the degree to which imports affect the price support program and the American farmer;
- the effects of recent import reclassifications and the quantity and type of information USDA and Customs have about tobacco imported into the United States;
- the effects of the "drawback" provision. "Drawback" refers to a system under which tobacco

manufacturers get a refund of 99 percent of the import duty paid on foreign tobacco if they export a similar quantity of manufactured tobacco products; and

- the effect of the proposed Caribbean Basin Initiative on American tobacco imports. The initiative, if passed, would grant duty-free treatment to a number of articles, including tobacco imported from specified Caribbean Basin countries. The President introduced the initiative in February, and it has been written into S. 2237 in the Senate and H.R. 5900 in the House. However, no action has been taken on the one-way free trade components of the bills. Markup on H.R. 5900 may begin during this year's lame-duck session of Congress.

## THE TOBACCO LEAF SITUATION AND OUTLOOK<sup>1</sup>

### 1982 Marketings and Cash Receipts Smaller

U.S. tobacco production in 1982 is forecast to be 6 percent below 1981. Both flue-cured and burley had lower effective quotas. Total acreage was 9 percent lower and was the lowest since 1979. Average yield for all tobacco is up 2 percent. Burley production per acre gained, but flue-cured declined (table 9). Despite heavy rains in June and July, the quality of the flue-cured crop as measured by USDA official grades improved from last year, while burley quality declined.

The smaller flue-cured crop has lowered supplies of that type about 1 percent. The larger burley crop has increased burley supplies about 8 percent.

Prices for all tobacco this season will likely average around 8 cents a pound more than last season, setting a record. Because of weak demand, though, the gain in average prices will probably fall short of the increase a year ago. The price rise this year largely reflects an increase in price supports. The volume of tobacco placed under loan this season will greatly exceed that of the 1981 season. Although prices are higher, the smaller crop may result in lower cash receipts from 1982 tobacco marketings than a year ago.

### 1983 Marketing Quotas and Allotments Lower for Flue-Cured

The 1983 national basic quota for flue-cured tobacco is 10 percent below 1982. When the overquota marketings

Latest year projected.

USDA

Neg. ERS 8149-82(11)

from the 1982 crop are subtracted, the effective quota (sum of individual farm quotas) is down 8 percent. The national acreage allotment was set at 457,500 acres, 16 percent below 1982, because the national yield goal was increased by 7 percent under provisions of the no-net-cost law. Flue-cured growers voted in a referendum on December 16 whether to accept marketing quotas on their next three crops.

By February 1, USDA will announce the 1983 marketing quotas and acreage allotments for burley and several other kinds of tobacco. Shortly after that announcement, growers of burley and Virginia sun-cured types will vote for or against marketing quotas on their next three crops. Kentucky and Tennessee fire-cured and dark air-cured producers will vote in special referenda on whether

to change from acreage allotments to poundage quotas. Producers of Virginia fire-cured, Ohio filler, and Wisconsin and Connecticut binder types approved marketing quotas for the 1983 crop in previous referenda.

**Tobacco Prices and Parity Index**

\*Prices paid for all items including interest, taxes, and wage rates.  $\Delta$  82 is October indication

USDA

Neg. ERS 782-82(11)

Maryland and Pennsylvania tobacco growers, who will also vote in other referenda, turned down marketing quotas in the last referendum (1980), so Government price support is not available for their 1982 crop. Pennsylvania filler has never had marketing quotas. For Maryland, quotas last applied to the 1965 crop.

### Price Support To Rise

For eligible 1983 crops, the overall price support is likely to rise by 5 to 7-1/2 percent over 1982. This estimate is based on indicated changes in the parity index and the discretion the Secretary of Agriculture has in adjusting support rates. As required by law, the price support adjustment for 1983 will be based on the average of the parity index in 1980, 1981, and 1982, compared with the 1959 index level. But, under the no-net-cost law of 1982, the support increase can be held to 65 percent of the amount permitted under the basic price support legislation if the supply is considered excessive. In 1982, the 65-percent provision was applied to supports of burley, flue-cured, Virginia fire-cured, dark air-cured, Puerto Rican filler, and Connecticut Valley cigar binder. For these kinds, the 1982 price supports were 7.1 percent higher than a year earlier.

In 1983, depending on the supply and demand for a type of tobacco, price supports may increase a minimum of about 5 percent (under the 65-percent provision) to a maximum of over 11 percent (from the adjusted 1982 level to the full amount permitted under basic legislation). USDA usually announces average supports by tobacco types in the spring and reports individual grade loan rates just before the opening of the various marketing seasons.

As a condition of price support eligibility, tobacco producers must agree to contribute 1 to 4 cents a pound on tobacco marketed in 1982 to a no-net-cost fund or account.

### **Producers To Certify Tobacco Not Nested**

In November 1982, the USDA began requiring tobacco producers to certify in writing that any tobacco they deliver for price support has not been nested, that is, offered for official inspection after being loaded, packed, or arranged to conceal foreign material or tobacco of inferior grade, quality, or condition.

If the Commodity Credit Corporation (CCC) determines that a producer has knowingly delivered nested tobacco, the producer will be denied price support for any tobacco marketed during the marketing year in which the false certification was made. The new rule did not apply to the 1982 crop of flue-cured tobacco since marketing was completed.

### **USDA Authorizes Sales of Flue-Cured Loan Stocks to Foreign Buyers**

The USDA announced on November 30 that foreign tobacco buyers now will be allowed to purchase U.S. tobacco under Government price support loans. Foreign buyers may purchase tobacco directly from the Flue-Cured Tobacco Cooperative Stabilization Corporation. This is the first time direct sales to foreign buyers have been permitted. USDA proposed a limited sales authority in 1980, but the Stabilization Cooperative decided to continue to sell through dealer channels. Previously, the Stabilization Cooperative sold through U.S. dealers or U.S. offices maintained by foreign buyers.

The change was made because it may reduce losses under the no-net-cost tobacco program act by providing an additional option for selling the cooperative's tobacco stocks for export. The no-net-cost act mandates that any future losses, either on principal or interest, must be borne by producers.

### **Foreign Leaf Production Rises**

Global leaf production for 1982 is forecast at 14-1/2 billion pounds (6.57 million metric tons), 11 percent above last year's 13 billion (5.93 million metric tons). The rise occurred because of larger flue-cured crops in China, India, Brazil, Zimbabwe, and Argentina. Burley production increased in the United States, Brazil, Korea, Argentina, and Malawi. Cigar and fire-cured production declined, while Oriental and dark air-cured rose.

## **Flue-Cured**

### **1982 Auction Prices Gain**

Prices for the 1982 flue-cured crop gained 7 percent from 1981, about half the gain of a year ago. With a

smaller volume, the crop value declined about 8 percent from a year earlier. Loan placements were up sharply. Considering purchases from both the crop and Stabilization stocks, industry takings were down considerably from last season.

With weak demand for lower stalk tobacco, early-season prices averaged about the same as a year ago. The average price for all flue-cured tobacco belts moved up in September and October because of stronger demand for upper stalk tobacco, which carries higher support rates.

Compared with the 1981 season, prices of leaf, cutters, and lugs and nondescript were higher, and primings were lower. Increases were less than 20 cents a pound for the gainers in essentially all the grades. The season-average price for gross sales (including resales) was \$1.79 a pound—up 12 cents from last year's average. Average prices were up in the four flue-cured belts (table 12). Among the 86 markets, season averages ranged from \$1.66 to \$1.88 a pound.

Because of the lower effective quota, producer marketings totaled 987 million pounds, 157 million less than in 1981. The total includes 26 million pounds of 1981-crop tobacco that was overquota and carried over, but excludes 37 million pounds of 1982 crop that was overquota and is being held by the Stabilization Cooperative, for sale in 1983.

### **Quality Improves**

As measured by Agricultural Marketing Service grades, crop quality was better than last year. There was a larger proportion of fair and good grades in 1982 and less low, poor, and nondescript quality tobacco. The share of leaf increased, and there was a larger amount of ripe or mature kinds and less variegated or green tobacco (table 13).

Loan volume reached 26 percent of sales, up sharply from 9 percent in 1981. Leaf and cutter grades dominated the loan receipts.

### **Auction Sales Ended November 1**

Sales in the Georgia-Florida area opened a week later than last year and began a little behind crop maturity there. The opening was later so that the new no-net-cost legislation could be implemented. But the smaller crop meant sales ended on November 1, 2 weeks earlier than usual.

The sales opportunity averaged about 85 million pounds weekly, about the same as last year, and resale allowance for warehouses remained at 10 percent. Again this season, growers designated a warehouse for the sale of their crop, and the USDA Flue-Cured Tobacco Advisory Committee recommended opening dates and selling schedules. A buyer rotation plan was used, and selling times were allocated according to the grower designations. Growers could change their designation at the beginning of each month, if they wished.

Resales averaged 7 percent of gross sales, the same as in 1981. About 5-1/2 percent of the tobacco was sold outside the belt where it was produced (table 13). Unlike last season, there was a provision in 1982 for the Stabilization Cooperative to handle carryover tobacco. The carryover program was adopted because provisions of the no-net-cost act eliminated fall leasing—leasing during the marketing season—for flue-cured tobacco. Prior to the enactment of the no-net-cost law, producers were allowed to lease additional quota for their farms if their

<sup>1</sup>Preliminary.

Compiled from records and reports of Tobacco Division, AMS.

tobacco production exceeded 110 percent of the effective farm marketing quota. The handling of the tobacco under the carryover program is limited to the Stabilization Cooperative to assure that it will be isolated from commercial trade channels and will not be marketed until the subsequent marketing year.

### Export Volume May Decline

Despite the improved quality of the U.S. crop, exports are expected to drop. Larger supplies in Brazil and Zimbabwe, high U.S. prices, the strength of the U.S. dollar, and large cigarette tax increases in the United Kingdom and West Germany all are contributing to the decline. Japan has taken 15 percent less tobacco in 1982, but its shipments are usually bunched around the end of the calendar year. In general, larger, less costly stocks abroad are holding down our 1982/83 exports to most destinations. By June 1983, flue-cured exports may be a tenth lower than the 1981/82 total of 523 million pounds.

### Supplies Increase in 1982/83

Although carryin stocks were 7 percent larger this season, the smaller crop has brought the flue-cured supply to 3.13 billion pounds, slightly below last year (table 16). The 1982 outturn was the smallest since 1979. Harvested acreage was down 14 percent from 1981, and yield was 4 percent lower. A downturn in U.S. exports, along with likely lower domestic use this marketing year, means total disappearance may drop from last year's level. Next July's carryover could rise, with loan holdings likely to account for most of the increase.

The Flue-Cured Stabilization Cooperative, the association handling tobacco under loan, sold 89 million pounds during January-November, while loan receipts reached 260 million. So, by January 1, 1983, unsold loan stocks will rise sharply from the 489 million pounds held a year earlier.

### 1983 Quota Reduced

On November 30, USDA announced a national flue-cured marketing quota of 910 million pounds for 1983 (table 17). The 10-percent reduction was made to bring supply in closer balance with utilization.

Acreage allotments and poundage quotas for individual farms will reflect 1982 under- and overmarketings. The base quota minus estimated net overmarketings means that the 1983 effective quota is about 895 million pounds, 8 percent below 1982. A crop close to the quota, when added to prospective carryover, would provide a 1983/84 supply that is a little smaller than this year's.

### The Foreign Flue-Cured Situation Varies

This year's flue-cured production in Ontario, Canada is estimated at 170 million pounds, 40 percent below the target level of 237 million. Production was lowered by a severe frost in late August. Auctions opened in mid-September, and by late November sales averaged Can \$1.63 a pound, or 7 cents above the guaranteed minimum. The Canadian Manufacturers Council gives rebates on a graduated scale of 8 to 25 cents a pound for exports, which this year are targeted at nearly 100 million pounds.

Brazil's production of flue-cured tobacco increased a fifth in 1982 and is expected to increase again in 1983. India's 1982 crop is larger, and prices are higher than last year.

The 1982 flue-cured crop in Zimbabwe rose by 32 percent (table 18). Markets closed in October. Prices averaged \$0.98 per pound.

## Burley

### Burley Prices About the Same

Before Christmas burley sales totaled 597 million pounds (gross) and averaged \$1.80 a pound. Even with

the large crop, growers sold nearly three-fourths of it before Christmas. Sales began November 17, earlier than usual, because large quantities of tobacco had been prepared for market. However, as in the past, there will be 16 sales days before Christmas.

Burley auction prices before Christmas averaged about the same as last year even though price supports are 7 percent higher, because quality and demand were down. Sales contained a larger percentage of tobacco being designated as No Official Grade (NOG) than last year. Also, more fifth quality but less third and fourth quality appeared for sale.

Loan rates by grades range from \$1.16 to \$1.95 a pound, with an average support level of \$1.751. The level was scaled back the full amount permitted under the no-net-cost law. Before Christmas, loan receipts were 25 percent. Last season's receipts were less than 1 percent for the whole season.

Again in 1982/83, USDA is providing official grading and price support for untied burley packed straight in bales and offered for sale at auctions. Most burley is now sold in this manner. Some tobacco is also being sold in burlap sheets, and price support is now available for all tobacco sold this way; on December 3, USDA reversed its November 17 ruling that it would provide price support and official grading only for burley offered for sale at auction tied in hands or untied in bales. The decision was made to ensure orderly marketing of the remainder of the 1982 burley crop. Before the decision, Federal District courts in a number of burley-producing States had issued restraining orders that mandated official grading and price support for tobacco sold in sheets.

### 1982/83 Disappearance Rises

During the year ending September 30, 1982, burley disappearance totaled 605 million pounds, 4 percent above the previous year but still 4 percent below 1979's record. Domestic use dropped 3 percent while exports rose by a third. More ample supplies boosted exports, but reduced cigarette demand lowered domestic use. Although most burley goes into cigarettes, some is used in other products. Domestic use is likely to decline again in 1982/83, while exports may rise a little. Total use in 1982/83 is likely to decline.

Burley exports last year were a record 141 million pounds, 35 million above the year before. West Germany, Italy, and Japan remained the leading markets.

### Supplies Increase

This season's burley supply, 1.86 million pounds (estimated marketings plus carryover), is 8 percent above a year ago and a record (table 16). The 1982 crop, estimated at 789 million pounds as of December 1, is 8 percent above last year. However, marketings are estimated at only 740 million pounds, because many growers produced more than 110 percent of their effective quota. Prohibitive penalties are imposed on sales above 110 percent of a grower's effective quota. This season's effective farm poundage quota was 8 percent below last year, but growers still increased acreage by 1 percent. Yields are the highest in 4 years.

Carryover on October 1 rose 12 percent from a year earlier. Most of it was owned by manufacturers and dealers, because loan stocks were less than a million pounds. With the record large crop, carryover next October 1 is expected to increase. Loan holdings are expected to rise sharply. The 1982/83 supply is 3.1 times

probable disappearance, well above the desirable ratio of 2.6 years' use. In addition, manufacturers and dealers held 290 million pounds of foreign-grown burley on October 1—25 million higher than a year earlier.

### 1983 Quota Decision by February 1

The 1983/84 outlook for burley hinges partially on the quota decision USDA will make by February 1. Burley poundage legislation requires that the national quota be neither less than 95 percent of estimated disappearance for that marketing year nor less than 95 percent of the previous year's quota. For 1982/83, the basic allotment was set at 680 million pounds. Because cigarette demand is declining and exports may change little from last year, disappearance may be down slightly.

Despite production above the effective quota, marketings this year are expected to fall short of the effective quota, and next year's effective quota will exceed the basic quota. The 1983 effective quota may exceed the basic quota by about 25 million pounds.

### Southern Maryland

#### 1981/82 Disappearance Rises

During the year ending September 30, 1982, disappearance of Southern Maryland tobacco was 34 million pounds, 7 million above the previous year and the highest since 1975 (table 21).

Domestic use of Maryland tobacco rose 7-1/2 million pounds from the previous year. Exports totaled 8 million pounds—a little more than 1/2 million below the previous year. Switzerland's takings rose to about 63 percent of U.S. exports, after declining to 59 percent the year before. Because of larger supplies of aged tobacco, total use in 1982/83 may be about the same as last season.

#### Supplies Gaining

Total carryover including the 1981 crop, on January 1, 1983, is forecast about 3 million pounds above a year earlier. The 1982 crop is estimated at 36 million pounds, 9 million below the previous season. In 1981, about a third of the crop came from the flue-cured area, but very few growers who planted Maryland tobacco in flue-cured States in 1981 did so again in 1982. The 1981 farm act provided prohibitive penalties for growing and marketing Maryland tobacco in most quota areas.

The supply (current crop plus estimated carryin stocks) for 1982/83 is .83 million pounds, 1-1/2 million more than a year earlier. Auctions for the 1982 Maryland crop will begin in March 1983.

## Fire-Cured

### Auction Prices Drop

Auctions for Virginia fire-cured tobacco (type 21) opened November 22, with prices for the first nine sales averaging 10 cents a pound below last season. The quality was lower, and grade prices were down, generally 7 to 18 cents a pound. This year's Virginia crop is 400,000 pounds more than last year's. Auctions for Kentucky-Tennessee fire-cured (types 22-23) are expected to open around the middle of January.

### Larger Crop Hikes Supplies

The 1982 fire-cured crop is an estimated 47 million pounds, 10 million or 26 percent larger than a year ago. The larger crop raises the 1982/83 supply to 119 million pounds. Based on last season's use, this amount would last more than 3 years. On October 1, the beginning of the marketing year, loan stocks had reached 10 million pounds. Disappearance varies widely from year to year, but it likely will not rise enough to prevent total carry-over next October 1 from increasing (table 22).

## Disappearance Lower Last Season

The disappearance of fire-cured types in 1981/82 was 37-1/2 million pounds—about 4-1/2 million below the previous season. Domestic use decreased, while exports rose. Output of snuff and chewing tobacco increased a little.

In Malawi, the largest exporter outside the United States, 1981 production was 26 million pounds, and in November the 1982 crop was estimated substantially lower at 16 million. Large surplus stocks from earlier crops have been reduced.

## Dark Air-Cured

### Auction Prices Mixed

Auction markets for One Sucker and Green River tobacco (Kentucky-Tennessee dark air-cured, types 35-36) opened December 6 and November 30, respectively. Auctions for Virginia sun-cured (type 37) started December 7. Growers received more for type 36 than they did last season, but less for types 35 and 37.

## Supplies Increase

At an estimated 19 million pounds, the dark air-cured crop is up 2-1/2 million from 1981. The supply of dark air-cured and sun-cured tobacco for 1982/83, at 58.4 million pounds, is 4 million above 1981/82. Total supplies of dark air-cured tobacco represent nearly 4 years' use, based on last year's disappearance. Carryover may increase because disappearance may be less than current production (table 23).

## Disappearance Stable

Disappearance of dark air-cured tobacco during 1981/82 was 14.2 million pounds, slightly above the previous marketing year. While the output of chewing tobacco and snuff increased, other uses declined. The relatively small rise in prices for the 1981 crop may have helped to stabilize dark air-cured use.

## Cigar Tobacco

### U.S. and Puerto Rican Supplies Decline

Supplies of U.S. and Puerto Rican cigar tobacco are down a little in 1982 because production has declined. Supplies of cigar filler and binder types have changed little; most of the decline is in wrapper. On October 31, Government loan stocks stood at 16.8 million pounds, 6.4 million above a year earlier.

Production of cigar types is forecast about a fifth lower than 1981's outturn. Wrapper production is down sharply. U.S. cigar leaf is sold either directly on farms or

through cooperatives. As of early December, no sales had been reported. Season-average prices will be published in the May 1982 issue of USDA's *Crop Production* report.

### Filler and Binder Supplies Decline

Supplies of continental cigar filler (U.S. and Puerto Rican types 41-46) declined slightly this season to 93 million pounds, because of a smaller crop. Filler production was 1 million pounds less in 1982, while carryover was about the same. Recent disappearance indicates that ending stocks are likely to decline by the close of the marketing year.

Supplies of cigar wrapper tobacco for 1982/83 are about 3-1/2 million pounds below last year, with both Connecticut Valley and Georgia-Florida wrapper supplies down. Type 62 tobacco has not been grown since 1977. The cigar wrapper carryover next July 1 is likely to continue its long downtrend.

During October 1981-September 1982, manufacturers used fewer imports than a year earlier—a response to declining cigar production. Last season, 72 million pounds of cigar tobacco were imported for consumption. Stocks of foreign-grown cigar leaf in the United States on October 1 were 89 million pounds—about 4 million below a year earlier.

For 1982/83, binder tobacco supplies will remain about the same, since production is down. Cigar binder disappearance last season was 22 million pounds, up slightly from a year earlier. The principal outlet for this type of tobacco is looseleaf chewing tobacco. Binder disappearance has followed a cyclical pattern. So, it may drop this year, and stocks may rise a little.
